Why Bread Rises

by Lena

Flour, water, salt, time

Yeast is alive

It eats sugar

It breathes out CO2

Gluten: the balloon

Kneading builds the net

Proofing: patience

Too warm, too fast

Too cold, too slow

Sourdough: wild yeast

Feeding the starter

Oven spring

Steam makes the crust

The crumb tells a story

My first brick

My hundredth loaf

Tools you do not need

Bake on Saturday

Share the bread
